

# RODENT TREATMENT CLIENT PREPARATION FORM

In order for our company to provide the most effective service possible, we ask that before our arrival you review and complete all the necessary preparations listed below. The following steps will ensure that your Technician is able to provide an effective and safe treatment.

## **HOW TO PREPARE FOR THE SERVICE** -(Action only to be taken in areas of the activity)

- Do not remove rodent droppings before inspection (this will allow the Technician to further determine level of activity, population, etc.)

### *KITCHEN & BATHROOM*

- Empty only ground level cupboards and drawers of all dishes, pots, pans, cans, food, etc.

*ATTIC* • Remove any obstacles around or leading to the attic access door.

### *BASEMENT & CRAWLSPACE*

- Remove any obstacles near or around electrical panels, furnace units, air exchange units.

### *LAUNDRY ROOMS*

- Remove any obstacles near or around laundry machines.

### *GARAGE*

- Remove any obstacles on the ground level near or around the inside walls (walls that are attached to the home).
- The garage should be free of any vehicles before inspection.

*BATHROOM* • Clear out all items from your cabinets and sink vanity drawers

## **WHAT YOU CAN EXPECT FROM THE TREATMENT**

Your Technician will start by checking the exterior and interior of your home for obvious entry ways for the rodent and recommend repair options. A single control measure may not be effective against more severe infestations so each case is entirely unique. Your Technician may set up and implement a program using baited mouse traps, mechanical traps and glue boards where deemed necessary. Extreme caution and safety is exercised when implementing control measures including placing baited traps in tamper resistant secured stations, and in areas that are as inaccessible (to people & pets) as possible. All treatments will be made with your safety in mind to ensure your health.

## **AFTER THE TREATMENT**

The control program is only effective if the following steps are taken after your home is serviced:

- DO NOT move any of the stations or traps.
- DO NOT use any other rodent control products (this can work against the control measures put in place)
- Follow the Technician's recommendations for any repairs needed to close entry points.
- Remove all competing food sources (this means keeping all pet foods in tightly sealed containers, cleaning up spills as they occur, removing trash on a regular basis, etc.)
- Your Technician will return after the extermination has been completed to remove all baits and traps. This should be arranged prior to service.

## REMINDER

**It is not necessary for you or your pets to leave your home before, during or after the treatment.**

Please be patient, depending on the infestation level effective control can take a period of time.

## Your Technician...

- Receives on-going training in their branches and at Abell University on-line
- Audited regularly by the industry's most recognized Quality Assurance Team
- Fully Insured
- Follows Quality Pro standards
