

WASP / CARPENTER BEE CLIENT PREPARATION FORM

In order for our company to provide the most effective service possible, we ask that before our arrival you review and complete all the necessary preparations listed below. The following steps will ensure that your Technician is able to provide an effective and safe treatment.

HOW TO PREPARE FOR THE SERVICE

EXTERIOR OF THE HOME

- Move all planters, patio furniture, etc 12" (30 cm) away from the walls (Please be sure to exercise safety first and do not attempt to move very large furniture)
- NEVER seal the entry points of where wasps have been seen going into the brickwork

WHAT YOU CAN EXPECT FROM THE TREATMENT

Your Technician will be injecting a pesticide directly in the nest (nests located in voids that are out of reach can be controlled by placing treatment at the point of entry) to kill all stages of the insect present in the nest. All treatments will be made with your safety in mind to ensure your health.

All persons and pets are to be kept away while the Technician is treating the area.

AFTER THE TREATMENT

- DO NOT use other pest control chemicals (powders or sprays) or cleaning products anywhere near bait placements or spray, as this will decrease or eliminate their effectiveness.

REMINDER

It is not necessary for you or your pets to leave your home before, during or after the treatment.

Your Technician...

- Receives on-going training in their branches and at Abell University on-line
- Audited regularly by the industry's most recognized Quality Assurance Team
- Fully Insured
- Follows Quality Pro standards
